new drainage technologies born of experience

PULL & PUSH

Thanks to double integrated valve drainage procedure can be completed by mean of simple "pull and push" manoeuvres. Three-way stopcock no longer needed.

EXTENSION LINE

By connecting an extension line it improves patient comfort in case of extended use of the device and more flexibility for users.

VERRES NEEDLE

retractable tip to achieve safe and efficient access. The blunt tip retracts during penetration and extends when the needle enters free space.

POLYURETHANE CATHETER:

totally radiopaque, anti kinking and cut-resistant. It is biocompatible and thermosensitive which makes it the first choice for long-term drainage. Larger inner diameter increases drainage flow rate.

DOUBLE INTEGRATED ONE-WAY VALVE

designed to improve comfort and safety of your drainage procedures. The valves ensure patient and users safety by reducing risk of external environment contamination, pneumothorax and fluid leakage.

Veress needle with luer lock port for primary positioning check.

The best for pneumothorax treatment (primary and secondary), malignant or chronic pleural effusions and uncomplicated empyema.

STANDARD

	CODE	PCS/BOX
Percutaneous drainage Kit - CH/Fr 9	10800	6
